## IMPROVE CARTON SET UP CAPABILITIES

### **UPGRADE YOUR EXISTING CARTON SET UP ON YOUR CLYBOURN VERTICAL CARTONER WITH A NEW PMP 3 HEAD ROTARY CARTON FEEDER.**

The PMP 3 Head Rotary Upgrade Package will convert your existing Clybourn Vertical from the single or dual carton suction pipes to an integrated Rotary Carton Set Up.

#### FEATURES / BENEFITS

- ✓ Eliminates the transfer timing issues that can be found using the dual set of suction arms
- ✓ Eliminates the vacuum adjustments on both the auxiliary suction pipe and main suction pipe
- ✓ Greatly simplifies carton changeovers while reducing changeover time required as only a single timing adjustment is required
- ✓ Significantly reduces numerous wear and maintenance parts such as rod end linkages, springs, carton set up cams and cam followers, vacuum valves and valve bushings
- ✓ Slows down actual carton set up speed by dividing the set up into three (3) positions thus providing slower carton opening time resulting in improved carton set up performance

Example: A cartoner using a PMP 3 Head Rotary running at 90 cartons per minute will actually set up cartons in each of the (3) three positions at 30 cartons per minute. This is accomplished due to the multiple suction pipes employed at 30 cartons per minute as compared to the single pipe set up cycling at 90 cartons per minute

The Rotary Carton Feeders can be installed in your plant along with set up training with minimal interruption.

Optional features include: PMP carton pre open system for difficult cartons- The system actually pulls the carton panels apart before placing into the carton pockets.
